The CUSP Research Seminar Series presents:

RACIAL DISCRIMINATION IN THE SHARING ECONOMY: EVIDENCE FROM A FIELD EXPERIMENT

Michael Luca
Harvard Business School

Wednesday March 30th, 2016, 4:00 PM

Abstract

Online marketplaces increasingly choose to reduce the anonymity of buyers and sellers in order to facilitate trust. We demonstrate that this common market design choice results in an important unintended consequence: racial discrimination. In a field experiment on Airbnb, we find that requests from guests with distinctively African-American names are roughly 16% less likely to be accepted than identical guests with distinctively White names. The difference persists whether the host is African-American or White, male or female. The difference also persists whether the host shares the property with the guest or not, and whether the property is cheap or expensive. We validate our findings through observational data on hosts’ recent experiences with African-American guests, finding host behavior consistent with some, though not all, hosts discriminating. Finally, we find that discrimination is costly for hosts who indulge in it: hosts who reject African-American guests are able to find a replacement guest only 35% of the time. On the whole, our analysis suggests a need for caution: while information can facilitate transactions, it also facilitates discrimination.

About the Speaker

Michael Luca is a faculty member at Harvard Business School. Professor Luca works closely with companies and cities to help them become more data-driven, and has ongoing collaborations with Yelp, Facebook, the UK government, and the City of Boston, in addition to other partners. Professor Luca teaches The Online Economy, an elective course about the strategic and operational decisions faced when designing and launching an online platform. He also teaches an elective course in which student teams develop behavioral interventions and experimental designs for government and company clients, called IFC: Behavioral Insights. Professor Luca’s current work focuses on digital data and platforms, analyzing a variety of companies including Yelp, Amazon, and Airbnb. Professor Luca also works on issues related to the design of information disclosure. Focusing on the behavioral foundations of how people make decisions, he has done work on rankings, expert reviews, online consumer reviews, and quality disclosure laws, among other types of information provision. His work has been written about in a variety of media outlets including The Wall Street Journal, New York Times, Washington Post, Boston Globe, Guardian, Telegraph, Huffington Post, Harvard Business Review, Atlantic, Quartz, Vox, and Forbes.

About CUSP

The Center for Urban Science and Progress (CUSP) is a unique public-private research center of NYU that uses New York City as its laboratory and classroom to help cities around the world become more productive, livable, equitable, and resilient. CUSP observes, analyzes, and models cities to optimize outcomes, prototype new solutions, formalize new tools and processes, and develop new expertise/experts. The CUSP research seminars aim to promote an intellectual community around urban informatics, an intrinsically multidisciplinary field, by facilitating discussions on various research topics related to the intersection of big data and urban planning. http://cusp.nyu.edu/
